**T/C Risk Management Services** provides *excellence in safety training and consultation* to protect people from injury and property from devastation. This difficult task is accomplished by:

**TRAINING** – Innovative instructor and facilitator who conducts classroom and on the job training in a wide range of highly technical and complex subjects involving risk management and OSHA required compliance training.

- Provides expertise in electrical safety and NFPA 70E from a realistic and practical approach to this controversial exposure;
- Conducts Fall Protection Training for construction and general industry, including wind and tower climbing and rescue;
- Proficiently instructs OSHA and ANSI lock-out/tag-out procedures, policies, and application;
- Skillfully provides practical hands-on training for Confined Space Training and Rescue for a wide variety of industries to include wind;
- Authorized educator for OSHA 10 & 30 hour for construction and general industry with effective training that has influenced client's overall performance concerning safety and health;
- Capably provides tools and techniques for Management Accountability Programs that instructs leaders how to effectively reduce employee injuries;
- Coaches Safety and Health Management Systems and Processes that provides a means of engaging employees in the overall safety process;
- Develops safety and health training programs, policies and procedures that help ensure employee knowledge and proficiency that is based on the particular exposure.

**CONSULTING** – Assists companies in administering Safety and Occupational Health Programs by providing value added services for various construction and general industry exposures throughout the United States and Canada.

- Advises, establishes, coordinates and evaluates the overall effectiveness of safety and occupational health programs, policies, plans and procedures to provide recommendations for appropriate engineering and administrative controls, procedures and requirements as necessary;
- Conduct audits of facilities and jobs sites to evaluate effectiveness of education and overall effectiveness of safety programs, policies and procedures and offers recommendations for improvement, if needed;
- Assists with reporting and record keeping for mishap investigations along with systematic compilation and analysis of data to identify trends in severity and frequency, and uses this information to improve and enhance the overall safety process;
- Provides expertise at OSHA inspections and informal conferences that offers needed assistance resulting in reduced citations;
- Conducts industrial hygiene surveys of occupational noise and air sampling and monitors various processes for occupational health hazards exposure;
- Effectively evaluates exposures and practices to develop safety policies, job hazard analysis, personal protective equipment surveys and site-specific safety plans.
